

Maria Aamelfot (DVM, PhD) is Director of the Biobank Department at the Norwegian Institute of Public Health (FHI), where she leads national biobank operations supporting large-scale population studies, including the Norwegian Mother, Father and Child Cohort Study (MoBa).

She has +15 years of experience across research, biobanking, and public health. Her work focuses on governance, quality systems, and enabling secure and efficient access to biological samples and health data. She is particularly engaged in how biobanks and data infrastructures can support high-quality research and precision medicine while maintaining trust, compliance, and ethical standards.

Dr. Aamelfot holds a PhD in virology and a veterinary degree (DVM). Her research background includes experience in virology, project leadership, and supervision of early-career researchers.
